superNOVA Maintenance Pack 13 available

9th February 2012

superNOVA Maintenance Pack 13 is now available and can be ordered from the [Download section](#).

The following significant changes are made from Maintenance Pack 12.2

- VITAE and VVTL support NAS locations
- Linux superNOVA platforms require configuration of kernel dump settings prior to upgrade of the superNOVA Enabling Package or the VITAE Base Components
- A new version of VME InFocus is provided which contains changes associated with NAS support for VITAE and VVTL
- Bugfixes to VITAE and VVTL

For more details see the Release Notes that are also available from the download section.
